Election/Restrictions

1. Claims 1-3, 5-12 and 15-22 are allowable. Claims 18-22, previously withdrawn from consideration as a result of a restriction requirement, requires all the limitations of an allowable claim. Pursuant to the procedures set forth in MPEP § 821.04(a), **the restriction requirement among inventions directed to a pneumatic adjusting element , as set forth in the Office action mailed on 6/24/08 , is hereby withdrawn** and claims 18-22 are hereby rejoined and fully examined for patentability under 37 CFR 1.104. In view of the withdrawal of the restriction requirement, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: Regarding claim 1, the prior art does not teach or render obvious a device for engaging and/or disengaging a roller comprising a basic unit connected to said roller via said feed unit, said basic unit for guiding a roller together with a feed unit in a direction parallel to said tangential direction of said second mating cylinder such that said basic unit moves said roller from a first position to a second position, said roller continuously engaging the second mating cylinder when said basic unit moves said roller from said first position to

said second position, said roller being in contact, with the first mating cylinder and the second mating cylinder in said second position, said roller being in contact with the second mating cylinder when said roller is in said first position, said roller being at a spaced location from the first mating cylinder when said roller is in said first position, said feed unit being positioned in a bisecting line position with a rotational axis between the first mating cylinder and the second mating cylinder when said roller is in said second position.

Regarding claim 8, the prior art does not teach a process for engaging and/or disengaging a roller comprising the steps of moving the roller with said feed unit in a direction tangential to an outer surface of the second mating roller such that the roller moves from a first mating roller position to a second mating roller position, said roller being in contact with the first mating roller and said second mating roller when said roller is in said second mating roller position, said roller being in contact with said second mating roller when said roller is in said first mating roller position, said feed unit having a rotational axis, said rotational axis of said feed unit bisecting an angle defined between a rotational axis of the first mating roller and a rotational axis of the second mating roller when said roller is in said second position.

Regarding claim 11, the prior art does not teach a printing press system comprising a basic unit, said basic unit being adjustable in position such that said basic unit moves said engagement roller in a direction parallel to said second mating roller tangential direction from a first roller position to a second roller position; a feed unit mounted to said engagement roller, said feed unit having a feed unit rotational axis, said

feed unit rotational axis bisecting an angle between said first mating roller rotational axis and said second mating roller rotational axis when said engagement roller is in said second roller position.
